

INVESTIGATION ON HOW THE LISTED WEB DESIGN PRINCIPLES AFFECT THE DESIGN AND IMPLEMENTATION OF A WEBSITE.

1. READABILITY.

GOOD READABILITY/POSITIVELY	BAD READABILITY/NEGATIVELY
• A website is easier to read when text is large enough. • Simple fonts are used and paragraphs are short and well-spaced. • Proper headings are used to organise information.	• Fonts are too small and the website is uneasier to read. • Difficult fonts are used and paragraphs are too long without proper spacing. • No heading used before paragraphs.

2. USABILITY.

GOOD USABILITY/POSITIVELY	BAD USABILITY/NEGATIVELY
• Links are easy to find. • Pages load quickly.	• Links are hidden. • Pages are cluttered and load very slowly.

3. USE OF COLOUR.

GOOD USE OF COLOUR/POSITIVELY	BAD USE OF COLOUR/NEGATIVELY
• Limited colours (3-4 main colour) • Clear difference between the colour and background colour. • Colours need to match website theme.	• Too many bright colours (6-11 colours) • Unclear difference between the colour and background colour. • Colours do not match website theme.

4. USE OF IMAGES.

GOOD USE OF IMAGES/POSITIVELY	BAD USE OF IMAGES/NEGATIVELY
• The pictures must be relevant to the content. • The pictures have reasonable sizes.	• The pictures are unrelated to the content. • The pictures are too large.

5. CONSISTENCY.

GOOD CONSISTENCY/POSITIVELY	GOOD CONSISTENCY/NEGATIVELY
• Same fonts across pages. • Same colour patterns the whole website.	• Each page has its own font. • Different colour patterns the whole website.
